

Technical Visit to PWN – Friday 25-08-2017 (09.15-14.00 hours)

In the morning we pay a technical visit to [PWN](#) (potable water production site). Afterwards we enjoy a lunch facilitated by PWN. PWN is responsible for the continuous availability of pure drinking water and valuable nature for the people of North-Holland.

Water extraction

PWN supplies drinking water via over 780.000 connections to private customers, companies and institutes in the Province of Noord-Holland. The one-and-a-half million customers use about 106 billion litres of drinking water a year. They purify surface water into drinking water in Andijk, Heemskerk and in the dune area. They also share their knowledge and expertise in the area of water extraction with local experts abroad. PWN contributes to the development of reliable water where it is needed the most.
